## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18 and 29, drawn to an apparatus for processing samples using interference light to detect changes in refractive indices, classified in class 356, subclass 517.
- II. Claims 19-25, drawn to chemical processes for analysis, classified in class 436, subclass 172.
- III. Claim 26, drawn to a platform with sensing areas with which no testing or measurement is claimed, classified in class 356, subclass 56.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, while Group I is drawn towards an apparatus using interference light for detecting refractive index changes, Group II is drawn towards chemical processes for analysis that do not involve light interference, and Group III is drawn towards a platform which also does not involve light interference or chemical processes for analysis.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by both their different classification and recognized divergent subject matter, and further because the search required for Group I

Art Unit: 2877

is not required for Group II or Group III, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
